

MEMPHIS® TANK-MIX COMPATIBILITY in Winter Wheat, Winter Rye, Spelt and Triticale

PLEASE ENSURE YOU READ THE NOTES SECTION
Memphis should be mixed with a (95% w/w oil - rapeseed fatty acid) adjuvant
This version supersedes all previous editions

Normal = Physically Compatible	(Italics in brackets) = Sprayable with Continuous Agitation	Red on Blue = PHYSICALLY INCOMPATIBLE	RED ON BLUE = CROP INJURY
BOLD CAPITALS = Physically & Biologically Compatible	(BOLD ITALICS IN BRACKETS) = Biologically compatible - maintain constant agitation

This summary sheet provides information on tank-mixes conducted with this product. Corteva Agriscience™ gives no warranty or accepts no liability in respect to compatibilities that are beyond the label. This additional information is for guidance purposes only and use is at grower's risk. **Important Note:** Do not use any tank-mix if the mixture cannot be applied within the label recommendations for individual products or if specific tank-mix restrictions apply. Larger, more complicated mixes; unlisted mixes or replacing alternative products to those listed in this table are not endorsed. However, for further information or to register a tank-mix request please contact your local Corteva representative or call the Technical Hotline on 0800 689 8899. Physical compatibility data is based on the results of an industry recognised standard test. Be aware that in the field, water hardness, PH, temperature etc. can vary. Biological compatibility data are based on a small number of field trials, Corteva Agriscience™ cannot warrant the efficacy of other tank-mix partners. Where only Physical Compatibility or Spray able with Continuous Agitation is shown, Corteva Agriscience™ has no biological data regarding efficacy or crop safety and only has data on physical compatibility, so growers use these mixes at their own risk.

NOTES
 Memphis should always be used with an approved adjuvant.
 # Topik is supported in mix with Memphis up to the end of February.
 Ø Residual herbicides can be used in mixture or short sequence with Memphis, while conditions are favourable for both products to work and weeds are small and actively growing. However, once soil moisture declines to reduce residual activity then a 4 week interval between the residual herbicide and an application of Memphis is recommended to maximise grass weed control and the tank-mix is no longer supported.
 ** Do not use this mix if the crop is under stress as there is the increased risk of an additive PGR effect and possible crop damage.
 † Corteva Agriscience only support Memphis in a 2-way tank mix with half rate chlormequat due to crop safety issues. An intervals of at least 7 days must be regarded before applying a higher rate of chlormequat or any other PGR.

Do not mix Memphis With OPs, MCPA and Dicamba.
 For products containing MCPA or Dicamba respect a 14 day interval between them and Memphis.
 Do not harrow or roll within 7 days before or after an application of Memphis.
