

Utrisha™ N Nutrient Efficiency Biostimulant is compatible with many crop protection products.

Application Guidelines:

- Each recommendation listed in the tables below has been tested for compatibility with Utrisha N. **Tank mixes with combinations of the products listed or any other combination is not guaranteed to be compatible.**
- The products below have been approved, but it does not guarantee that alternatives with the same active ingredients will also be compatible.
- **The tank-mix must be applied immediately.** Do not leave a Utrisha N tank-mix in the tank for more than 2 hours.
- Apply with a minimum of 10 GPA of water, unless otherwise indicated below.
- Use water with a total chlorine content <2 ppm.
- Use water with a pH between 5 and 8.

Tank-Mixing Instructions

1. Fill spray tank half-full with water.

- Use water with a total chlorine content <2 ppm.
- Use water with a pH between 5 and 8.
- If using chlorinated water, use as a chlorine inhibiting product.

2. Begin agitation

3. Add Supported Tank-Mixes in the following order:

- Wettable Powders/Dry Flowables
- Soluble Concentrate (SC) or liquid flowables
- Capsule Suspension (CS) or Suspension Emulsion (SE)
- Soluble Liquids (SL)
- Emulsifiable Concentrate (EC)
- COC, NIS, MSO, other adjuvants

4. Add Utrisha™ N Nutrient Efficiency Biostimulant directly to application tank.

5. Top off with water

6. Spray immediately after mixing

Supported tank-mix list is as of October 2023. This document ONLY contains information about Corteva Agriscience recommendations. Consult the manufacturer of the other product(s) to ensure they do not contradict the mixture, and for guidelines, label use instructions and precautions.

Always read and follow label directions.
