

# MatchPoint<sup>®</sup>

## INSECTICIDE

MatchPoint<sup>®</sup> insecticide gives golf course superintendents and sports turf managers outstanding annual bluegrass weevil (ABW) larvae control. Fast-acting, it stops ABW larvae from feeding immediately and controls the first to the fifth instars.

Introducing the latest innovation in annual bluegrass weevil (ABW) larvae control. With the power of spinosad and a new lignin technology, MatchPoint® insecticide gives golf course superintendents and sports turf managers outstanding ABW larvae control with convenient application flexibility.

### Powerful control

MatchPoint stops ABW larvae from feeding immediately and controls one to five instars. MatchPoint works through contact and ingestion, resulting in quick knockdown and residual control with convenient application flexibility.

### Early control of insect-resistant ABW

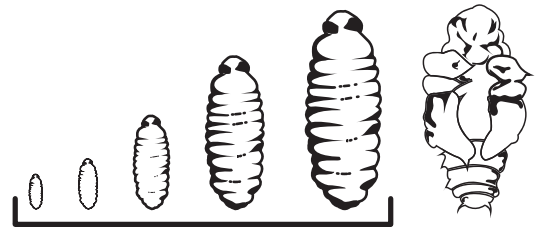

MatchPoint controls pyrethroid-resistant ABW larvae. It has a unique Group 5 mode of action, which makes it an excellent choice for rotation programs. It's also compatible with integrated pest management programs.

### Innovative technology

MatchPoint has a lignin formulation that lowers the ultraviolet degradation of spinosad and provides consistent control. The new lignin technology means watering can be delayed for up to 24 hours.

NEW LIGNIN TECHNOLOGY MEANS WATERING CAN BE DELAYED UP TO 24 HOURS.
