

# Embed<sup>®</sup> Extra

HERBICIDE

Weed control  
with peace of mind

Embed<sup>®</sup> Extra herbicide is a formulation of 2,4-D that utilizes the choline salt of 2,4-D to provide citrus growers effective post-emergent broadleaf weed control along with peace of mind due to its best in class reduction in volatility and drift, tank mix flexibility and improved handling.

## Features

- Better risk management due to near zero volatility and low drift
- Flexibility as it is a stand alone 2,4-D product
- Growers can use alone or tank mix with product of their choice and apply during multiple application windows
- Applicator friendly due to low odor formulation, improved handling and a warning label

## Ease of Use

Embed Extra herbicide is systemic in action and hence results in a thorough weed control. It's easy to use and convenient because it provides better tank mixing, tank cleanout is easy with the water based formulation and is available in convenient 2x2.5 gallon package size.

See label and state application requirements for further information regarding wind speed, wind direction and timing.

Application timing <i>postemergence</i>	Embed Extra <i>(per acre)</i>	Directions
Annual and biennial broadleaf weeds	1 – 2 pts	Apply to annual weeds when small and actively growing
Perennial broadleaf weeds	up to 4 pts	Apply to perennial weeds from bud to bloom stage

## Citrus restrictions

- **Preharvest interval:** Do not make applications within 7 days of harvest
- Apply only to groves that have been established for at least one year
- Avoid irrigating trees directly before or after application
- Do not make aerial application of this product in citrus orchards
- Do not apply at wind speeds greater than 15 mph
