

PHYTOGEN
TRiO™
SEED TREATMENT

PhytoGen TRiO™ Seed Treatment is designed for growers driven to maximize the potential of their cotton. Through a unique combination of chemical and biological active ingredients, PhytoGen TRiO Seed Treatment helps cotton seedlings establish a strong root system for improved plant health by protecting cotton from early season insect, nematodes and disease pests. PhytoGen TRiO Seed Treatment coupled with powerful PhytoGen cottonseed genetics helps yield more robust plants by giving cotton a strong start for an even stronger finish.

DISEASE PROTECTION

Best-in-class control of key cotton diseases. Superior fungicide protection can deliver farmers better stands, as well as improved early season plant and root health.

Key diseases controlled:
 Pythium, fusarium, black root rot, Rhizoctonia

Modes of disease protection*:
 fludioxonil, myclobutanil, azoxystrobin, sedaxane, metalaxyl and/or mefenoxam.

INSECT PROTECTION

Protection against early season cotton insects through a broad spectrum, insecticide and biological combination.

Key insects controlled:
 thrips and aphids

Modes of insect protection:
 imidacloprid plus a new, unique biological insecticide

NEMATODE PROTECTION

Multiple modes of action against the most common cotton nematode species. Provides multi-site mode of action against eggs and juveniles, with activity by both contact and ingestion.

Key pests controlled:
 root-knot nematode and reniform nematode

Modes of nematode protection:
 a new, unique biological nematicide
