

# Enlist® Cotton + Peanuts

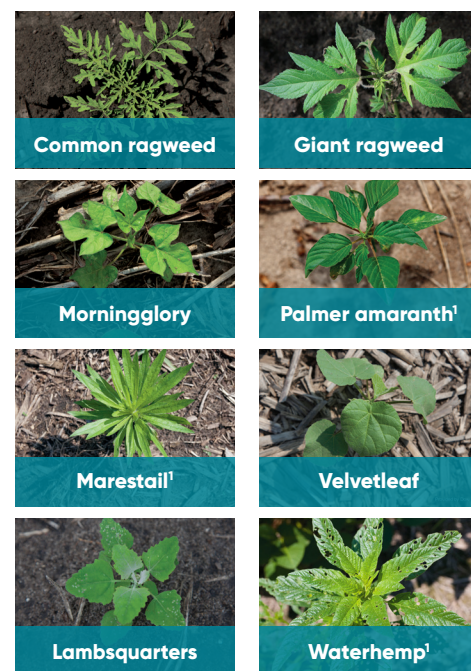

## Exceptional weed control compatible with your peanut cropping system.

Enlist® cotton lets you take control of weeds like never before with robust tolerance to 2,4-D choline, glyphosate and glufosinate. These multiple modes of action allow you to choose from the flexibility of Enlist One® herbicide or the convenience of Enlist Duo® herbicide. And because peanuts are naturally compatible, you can apply Enlist herbicides right up to an adjacent peanut field regardless of wind direction. Now you can control weeds your way for improved weed resistance management.

Tolerances
<p><b>Enlist® cotton</b></p> <ul style="list-style-type: none"> <li>2,4-D choline</li> <li>Glyphosate</li> <li>Liberty® herbicide</li> </ul>

Wide application window
<p><b>Enlist® cotton</b></p> <ul style="list-style-type: none"> <li>Up to first white bloom</li> <li>No calendar cutoff dates</li> <li>Enlist® cotton has no plant-back restriction after using an Enlist® herbicide for burndown.</li> </ul>

Apply with confidence to take down the toughest weeds, including:

## Enlist® cotton is naturally compatible with peanuts.

- Enlist® herbicides can be applied right up to an adjacent peanut field edge, regardless of wind direction.
- Like Enlist cotton, peanuts are inherently tolerant to 2,4-D and 2,4-DB.
- Peanuts are not classified as a susceptible crop to Enlist herbicide labels.

“We had no drift issues whatsoever. We have a watermelon and cantaloupe farmer in the area, so we were very concerned about drift. With Enlist Duo, we had absolutely no drift.”

*Jack Kent | Arkansas cotton farmer*

“The tank mix of 2,4-D choline and Liberty herbicide really did exactly what we wanted it to. Two weeks after application, we had excellent control. We were able to almost eliminate most weeds. It really took care of business.”

*Austin Warbington | Georgia cotton farmer*

<sup>1</sup> May require a broader management plan including timely application and use of a soil residual herbicide.

### Complete convenience.

Only Enlist Duo® herbicide combines the proven performance of 2,4-D choline and glyphosate. The two sites of action work together to deliver control of yield-robbing weeds and help prevent resistance.

**Application rate:** 4.75 pt./A

### Additional tank-mix flexibility.

Enlist One® herbicide provides additional tank-mix flexibility with Liberty® herbicide and other qualified tank-mix products, allowing for a customized weed control program to fit each farm. Farmers gain superior control of resistant and hard-to-control broadleaf weeds.

**Application rate:** 2 pt./A

## On-target application.

### 90% less drift than traditional 2,4-D

The drift reduction from Colex-D® technology combines with low-drift nozzles to cut drift by as much as 90% compared with traditional 2,4-D.

### 96% less volatile than 2,4-D ester

Near-zero volatility – up to 96% less than 2,4-D ester – helps keep Enlist® herbicides in place and improve control.
